VANITY Installation Guide

1.Ensure Wall is Flat & Plumb

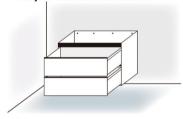

Before starting the installation, make sure you have all the necessary tools and materials. Clear the area where you will install the vanity, and make sure the floor and walls are clean and level. If you're installing a wall hung vanity, locate the studs in the wall where you plan to attach it.

2.Fix Your Cabinet

To install a vanity, assemble and secure a floor-mounted cabinet with screws or brackets, or attach a wall-mounted bracket to the studs and then to the vanity. Attach plumbing fixtures following the manufacturer's instructions, including the sink and faucet, and use plumber's tape or sealant as necessary.

3.Adjust The Door & Drawers

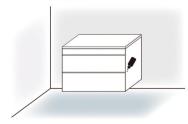

After installation every cabinet will need some adjustment as the doors and drawers move during transport and installation. The cabinet must be level before adjustments are made. It is the responsibility of the installer to ensure these adjustments are done correctly.

4.Fix Vanity Top / Basin

For vanities, fit the top to the cabinet using a thin continuous bead of non-acidic silicone on all four edges. Position the top so it has equal overhang on each side, ensuring the top surface is level. For separate Basin, position in place and fully seal the basin to the top using a continuous based of cilicone.

5.Seal Cabinet

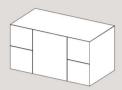

Seal all cabinet edges / gap against floor and wall to prevent water penetration.

We recommend that the wastes be tightened by hand only, and then silicone sealed to prevent stress and damage to the basin or top.
